

Abstract of the Disclosure

Feeder EZ is the only Game feeder hanging system that can hold a 30 or 55 gallon drum dispensing system containing up to 300 lbs of grain or feed from the (Trunk) of a single tree.

The only other feeder hanging system that is used on a tree is done so by hanging a 10 gallon container, holding no more then 30 lbs of feed from the branch of a tree using a rope and pulley system. Therefore making Feeder EZ hanging system more productive as it can hold larger containers on the tree because it does not require the use of branches and ropes. Instead it uses the main stability of the tree which is the trunk itself.

It is made of light weight aluminum and can be installed in seconds by one person.
